Education

VIT Bhopal University <i>B.Tech in Computer Science (Cloud Computing Specialization)</i> CGPA: 8.03/10.0	Bhopal, India 2023 – 2027
St. Francis Sr. Sec. School <i>Class XII – Senior Secondary</i> Grade: 79.6%	Bandikui, Rajasthan 2021

Experience

AI Backend Developer Intern <i>Self-Initiated / Freelance</i>	Jan 2026 – Present <i>Remote</i>
- Built AI-powered health monitoring features using OpenAI APIs and cloud-based backend services. - Developed REST APIs using Spring Boot for AI-driven symptom analysis and recommendations. - Integrated real-time biometric simulation and prediction workflows into a 4-layer ML inference pipeline. - Improved response automation and reduced manual health-report generation time by 70%.	

Projects

CABO <i>React, Spring Boot, PostgreSQL, Firebase, WebSocket, Docker</i> Live Demo	Feb 2026 – May 2026
- Built a full-stack college ride-sharing platform with 6+ REST APIs secured via JWT + Spring Security RBAC; deployed on Render + Vercel with automatic CI/CD from GitHub. - Implemented real-time WebSocket chat (STOMP + SockJS) for instant messaging and live seat updates, reducing invalid join requests to 0% via server-side duplicate booking prevention. - Architected the backend with PostgreSQL (Supabase) connection pooling and a complete admin moderation system with reporting, warnings, and blocking across role-based access tiers. - Integrated Firebase Authentication for secure login and protected frontend routes with end-to-end token-based session management.	
HealthSenseAI <i>Kotlin, MVVM, Python Flask, Scikit-learn, Google Gemini API, Firebase</i>	Dec 2025 – Apr 2026
- Engineered an Android health monitoring app in Kotlin (MVVM) generating 6+ real-time biometric parameters (Heart Rate, SpO₂, BP, Temperature, Sleep, Stress) every 10 seconds. - Deployed a cloud-hosted ML prediction API (Python Flask) classifying user health into 3 risk levels from biometric and lifestyle data; integrated via Retrofit with end-to-end REST communication. - Reduced manual health input by ~70% via automated sensor simulation; piped data into the 4-layer ML inference pipeline (sensor → ML → Gemini → UI).	

Certifications

AWS Cloud Practitioner Essentials – <i>Amazon Web Services</i>	May 2025
Foundational knowledge of AWS Cloud services, architecture, pricing, and the shared responsibility model.	
DevOps Fundamentals (CEDEV2IN) – <i>IBM Career Education</i>	Jun 2025
CI/CD pipelines, containerization (Docker), infrastructure as code, and agile DevOps practices.	
McKinsey Forward Program – <i>McKinsey.org</i>	Dec 2025
Structured problem-solving using McKinsey frameworks – hypothesis-driven thinking and data-driven decision-making.	

Technical Skills

Languages: Java, Kotlin, Python, JavaScript, SQL
Frontend & Backend: React, Vite, Spring Boot, Spring Security, Spring Data JPA, Flask, REST APIs, Hibernate
Cloud & Tools: AWS, Docker, Firebase, Render, Vercel, Git, GitHub, CI/CD, Postman, Maven, Android Studio
Databases & AI/ML: PostgreSQL, MySQL, Supabase, Scikit-learn, Google Gemini API, Prompt Engineering
